DETAILED ACTION

Specification

The status of the US serial numbers listed on page 1, line 3-5, page 5, lines 69, page 6, lines 1 and 14, page 15, lines 17-20, page 17, lines 15-18 should be updated.

Double Patenting

Claims 16-17 and 19-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 3, 11 and 23 of U.S. Patent No. 6,689,470. Although the conflicting claims are not identical, they are not patentably distinct from each other because the limitations of claims 16-18 of the instantly claimed invention such that the a carbon (coal-based cellular) foam having a thermal conductivity below about 1 W/m degree K and a density ranging from about 0.1 to about 0.8 g/cm³ are encompassed in the claims of the patent.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stiller (USP 6,506,354) teaches a process of making a carbon

Art Unit: 1744

foam wherein the process comprises de-ashing and hydrogenating bituminous coal, separating asphaltenes from oils contained in the coke precursor, coking the material to create the carbon foam; however, Stiller does not teach a thermal protection system comprising an insulating core comprising carbon foam having a thermal conductivity below $1 \text{ W/m}^{\circ} \text{K}$.

Response to Applicant's Remarks/Arguments

Applicant requested that the double patenting rejection be held in abeyance until the claims are deemed to be allowable. This rejection is maintained herein.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP 706.07(a). Applicant is remained of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
